

Lifetime Dry Basement Guarantee

We can make this promise because of our excavation experience and the extra care we take in the building process.

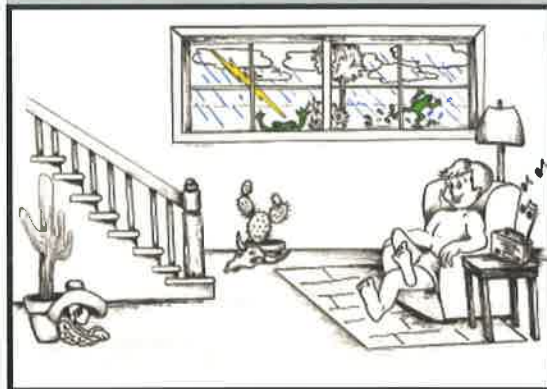

Naturally, we grade to create a positive drainage away from your home's foundation. But, we also extend gutters and downspouts to carry water out and away from the foundation.

Additives mixed with foundation concrete, along with our **Lifetime Dry Basement System™** which we designed, guarantees your basement will not leak.

We also use more clear stone at the drain tile and under the basement floor to keep water out of the basement.

We have the experience to determine good soil from unstable soil. When subsoil conditions are rocky or clay, we have the knowledge to perform the extra measures to insure proper installation of drain tile and sump pump.

FEATURES THAT KEEP YOUR BASEMENT DRY

THREE PART WATERPROOFING SYSTEM

With the use of the latest technology, this system combines special plasticizers, additives in concrete and controlled drainage.

POSITIVE DRAINAGE

By far the most important – we grade to create a positive drainage away from your foundation.
